Remote

- Responsible for technical deliveries and practices for a team of 10 developers.
- Managed and mentored 5 developers and a web hosting specialist.
- Identified needs and developed internal tools to support development of products.
- Was successfully brought in as project manager to be hands on leadership to complete projects and satisfy customers.
- Developed solutions using .Net/.Net Core/C#/SQL Server.

Director of Software Development/Senior Software Developer

1/2015-11/2019

Student Transportation Inc

Charleston, SC/Remote

- Designed and developed a Ruby on Rails/iOS/Android app suite that took in bus movement and sensor data from 3rd party APIs and file imports to provide analytics to districts, and to provide bus location and arrival ETA information to parents. Used a PostgreSQL database.
- Led a rewrite of the RoR application in Go to improve performance and save hosting costs.
- Managed a team of 4 other developers plus contractors to successfully complete many internal projects.
- Created a driver credentialing software with QR code-based document scanning and sorting that greatly sped up the process.
- Oversaw 40+ servers on an AWS environment using RDS, EB, EC2, S3, SNS, SES and other AWS services.
- Assisted CTO and Director of IT with technical decisions.
- Supported several aging PHP applications.

Technical Consultant/Software Developer

8/2011-12/2015

Freelance Software Developer

Summerville, SC

- Development projects by contract. Lead an eight-month iOS game development project using Cocos2d and Objective-C. Designed and developed a Ruby on Rails demo and several iOS/Android demos for local a local startup using the Google maps API. Designed and developed several Ruby on Rails real estate apps with RETS and IDX interfaces for local brokers. Developed commercial sites & mobile apps (PHP/RoR/iOS/Android) for local companies.

Director of Mobile Technologies

10/2012-12/2013

Selig Technologies, Inc.

Mount Pleasant, SC

- Sole mobile architect/developer for an iOS/Android automobile appraiser app. Ported existing app from Titanium to native iOS SDK.
- Worked with 3rd party data vendors to design and develop creative consumption and display of their data in the app. Determined need for a mostly web/native-hybrid platform.
- Architected new web platform for the app and completed 95% of the porting.
- Managed 2 contractors and 2 full-time developers.

Sr. Technical Consultant

4/2008-8/2011

Blackbaud, Inc.

Charleston, SC

- Software development using Agile Sprints. SQL query writing and tuning. Client care. Designed and developed customization solutions for an enterprise CRM based on the Infinity Platform (SQL/XML/.Net/Web Services). The position was part of Professional Services and involved heavy client interaction for requirements gathering, training and support. High profile clients.
